

ERRATA – Vol 2

1. p. C-20, end of paragraph, insert footnote:

Because only a small fraction (# 10%) of lead partitions to steel, the β bremsstrahlung from Bi-210 was not included in the analysis of the small steel object next to the body. However, because there is significant partitioning of lead to the fire-refined copper product, this radiation was included in the analysis of the small copper object next to the body.
